

L&D Round Table: Deep Dives into Ecosystems, AI, and Measurement Transcript Summary

The L&D Round Table discussed various topics, including engaging salespeople, the impact of AI on learning, and effective measurement practices. Chris Coladonato emphasized the importance of finding activities that recharge and refresh, while Alaina Schlachta focused on data-driven instructional design, suggesting starting with performance-focused measurement. JD Dillon highlighted AI's potential in language translation and digital assistants, stressing the need for proprietary dictionaries. The session concluded with practical tips for integrating AI into learning strategies and the importance of clear communication and measurement in training programs.

Action Items

- Explore using AI-powered digital assistants to help with tasks.
- Investigate how to measure the impact of training programs on specific business metrics or KPIs.
- Consider experimenting with different survey question formats to gather more meaningful data from learners.
- Identify the key business metrics or priorities that leadership cares about, and align learning measurement to those.
